Announcing ScapeRadio
The first 10k Generative MusicNFT Collection

—----> LINK <—----

Today marks the release of **Scape.Radio**- a collection of 10,000 generative music NFT's, composed by team member Ben Cronin. This is not a new token, but an addition to Scapes, a collection of 10,000 banners created by Jalil Wahdatehagh.

Each Scape now has a corresponding **SoundScape**- a 64 second piece of algorithmically generated music. Many generative NFT collections are created by combining layers of art on-chain. We composed a 64-second loop for each trait in the collection (120 in total), and combined them into 10k unique songs using code.

> *"I wanted to describe the world of Scapes with music, and create a common sonic identity. I also wanted to honor the algorithmic assembly of all the traits, and give up a sense of creative control. Instead of composing full pieces I created 120 individual loops that represent each visual trait of Scapes. My hope is that the music is fun as a listening experience. I also hope listeners feel more connected to the visual collection, and become awake to the harmony of their algorithmic assembly." — Ben Cronin, SoundScapes composer.*

This is **the first** 10,000 piece generative musicNFT collection.

There is a seamlessly looping player available at Scape.radio. Users can enter your Scape # in the search-bar, or scroll endlessly through all 10,000 Scapes. Alongside the player, we launched a dedicated channel in the Scapes Discord, which plays SoundScapes in perpetuity. Users can add Scapes to the queue if they'd like to hear a particular SoundScape.
